Fatal Work Injuries in Boston-Cambridge-Quincy – 2013 Workplace Injuries Increase Over the Year

Fatal work injuries totaled 42 in 2013 for the Boston-Cambridge-Quincy, Mass.-N.H., metropolitan area, the U.S. Bureau of Labor Statistics reported today. Regional Commissioner Deborah A. Brown noted that while the 2013 count was preliminary, the number of work-related fatalities in Boston increased by 20 over the year. Since 2003, fatal occupational injuries in the metropolitan area have ranged from a high of 49 in 2005 to a low of 22 in 2012. (See [chart 1](#).)

Nationwide, a preliminary total of 4,405 fatal work injuries were recorded in 2013, down from a final count of 4,628 fatalities recorded in 2012, according to results from the Census of Fatal Occupational Injuries (CFOI) program. Final 2013 CFOI data will be released in late spring of 2015.

Chart 1. Total fatal occupational injuries, Boston-Cambridge-Quincy, 2004-2013

NOTE: Data for 2013 are preliminary.

SOURCE: U.S. Bureau of Labor Statistics.

Of the 42 fatal work injuries reported in Boston in 2013, violence and other injuries by persons or animals resulted in 15 deaths. Transportation incidents and falls, slips, and trips were responsible for nine deaths each. (See table 1). Seven of the fatalities within the violence and other injuries by persons or animals category were self-inflicted intentional injuries and six were intentional injuries by other persons. Within the falls, slips, and

trips category, 8 of the 9 fatalities were due to falls to a lower level. (Note that transportation counts presented in this release are expected to rise when updated 2013 data are released in spring of 2015 because key source documentation detailing specific transportation-related incidents has not yet been received.)

In the United States, transportation incidents were the most frequent fatal workplace event in 2013, accounting for 40 percent of fatal work injuries. Boston’s share of on-the-job fatalities due to this event was 21 percent. (See [chart 2.](#)) Violence and other injuries by persons or animals was the second-most frequent type of event nationally, with 17 percent of work-related fatalities; the share in the Boston area was 36 percent. Contact with objects or equipment and falls, slips, and trips each accounted for 16 percent of the nation’s workplace fatalities.

Chart 2. Fatal occupational injuries by selected event, Boston-Cambridge-Quincy and the United States, 2013

NOTE: Data for 2013 are preliminary.
SOURCE: U.S. Bureau of Labor Statistics.

Additional key characteristics:

The construction sector had the largest number of workplace fatalities in the local area with 12. Five of these worker deaths were caused by a fall to a lower level. (See [table 2.](#))

The trade, transportation, and utilities sector accounted for the second-highest count of workplace deaths in the Boston area with 11, up from the 2 recorded in 2012.

Workplace deaths in the government sector totaled four in 2013, down from the seven recorded in 2012. Violence and other injuries by persons or animals accounted for two of the worker deaths within this sector in 2013.

Construction and extraction occupations had the highest number of fatal work injuries with 11. (See [table 3.](#)) Ten of these fatalities were construction trades workers. Workers in transportation and material moving occupations had the next highest fatality count at six.

Men accounted for 38, or 90 percent, of the work-related fatalities in the Boston area. (See [table 4.](#))

In Boston, 83 percent of those who died from a workplace injury were white non-Hispanics, compared to the national share of 68 percent. Asians (non-Hispanic) accounted for 7 percent of those who died from a workplace injury in the local area. Nationwide, this group accounted for 3 percent of work-related deaths.

Nearly two-thirds of the on-the-job fatalities in the Boston area in 2013 were among workers 25-54 years old, the prime working age group. This was similar to the national share. In 2012, workers in this age group accounted for more than three-quarters of the local area's workplace fatalities.

Of the 42 persons that suffered fatal work injuries in Boston, 83 percent worked for wages and salaries, the remaining were self-employed.

Technical Note

Background of the program. The Census of Fatal Occupational Injuries, part of the BLS occupational safety and health statistics program, compiles a count of all fatal work injuries occurring in the United States during the calendar year. The program uses diverse state, federal, and independent data sources to identify, verify, and describe fatal work injuries. This assures counts are as complete and accurate as possible.

For technical information about the CFOI program, please go to the BLS Handbook of Methods on the BLS web site at www.bls.gov/opub/hom/homch9.htm.

Federal/State agency coverage. The Census of Fatal Occupational Injuries includes data for all fatal work injuries, whether the decedent was working in a job covered by the Occupational Safety and Health Administration (OSHA) or other federal or state agencies or was outside the scope of regulatory coverage. Thus, any comparison between the BLS fatality census counts and those released by other agencies should take into account the different coverage requirements and definitions being used by each agency.

Acknowledgments. The Bureau of Labor Statistics appreciates the efforts of all federal, state, local, and private sector entities that submitted source documents used to identify fatal work injuries, in particular the Massachusetts Department of Public Health.

The Boston-Cambridge-Quincy, Mass.-N.H. Metropolitan Statistical Area (MSA) includes Essex, Middlesex, Norfolk, Plymouth, and Suffolk Counties in Massachusetts and Rockingham and Strafford Counties in New Hampshire.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; Federal Relay Service: 800-877-8339.
